Logging into the Wordpress blog should be done on the actual blog itselfÂ via the regular blog login page. Nanacast controls the account creationÂ and subscriber access management by communicating with the blog uponÂ sign-ups and cancellations etc. through the plug-in, if you have configuredÂ it correctly. Alternatively you can use Nanacast's hosted content delivery system.Â Just edit the thank you receipt for your membership on the pricing and delivery settingsÂ to provide yourÂ clients a link or URL to your blog instead of the Nanacast login. Also, on your site you can just link to your blog or to your blog login for yourÂ clients to login.
