To require a Nanacast field in your forms or checkout pages go to Manage > Memberships (or podcasts, products etc) and on the management screen find the offer in question.

Listed with that offer will be many blue links where you can modify various settings. Find the link called "Notifications/Custom Fields" listed with your offer.

On the Edit Notifications and Custom Fields screen scroll down until you see the list of your active fields. Click edit next to the field you want to make required.

Check the field is required box on the edit page for that field and save.
