It's now possible to issue refunds for PayPal transactions in Nanacast for PayPal Premiere and PayPal Business accounts.

You'll need to enable the PayPal API for your account, capture your PayPal API credentials and provide them in your Nanacast profile in order for refunds of PayPal transactions to actually refund. Documentation on the required configuration for both your PayPal and Nanacast accounts can be found here:

<http://nanacast.com/docs/paypalAPI>

Note: Currently, you must still cancel recurring billing profiles from your PayPal account; otherwise marking a client as Unsubscribed in Nanacast will remove access from the offer, but will **NOT** cancel future PayPal billings.
