---

### **Video:** [Setting Up SMS/Voice Integration in Nanacast](#)

First, you'll need to have an account with [Twilio](#).

Next, you will need to provide your Twilio credentials in Nanacast:

- » From the main menu, click on My Account >> Profile & Preferences.
- » At the bottom of the Profile & Preferences page, in the Third-Party API Information area, you'll find the Phone Validation Settings section.
- » Here, you'll need to provide the AccountSID and AuthToken from your Twilio account.

Once you commit your Twilio credentials to your account, you are ready to use Nanacast features with SMS/Voice integration.
